

# SWINE FEED

Prince complete feeds are designed to meet all the nutritional needs for pigs in their particular stage of development. Our swine feeds use a variety of protein sources to meet multiple amino acid needs. Producers benefit from using a complete feed in that they can use a product that contains ingredients that they may not be able to inventory themselves. By doing this they can expect accurate blending and manufacturing to actually deliver what is needed, and they avoid using their own valuable time, efforts and equipment to manufacture feed. We recommend using Prince "Start-N-Gain" for pigs less than 40 pounds. The greater nutrient content, processing and greater digestibility is important in getting pigs started. When feeding leaner pigs with greater growth rates one should also consider keeping these pigs on a higher protein concentration.

## FEEDING SWINE

### STARTER FEEDS - (#001149)

"Start-N-Grow" products are designed to be fed to pigs from 10-50 pounds in weight. These starter products are 21% protein, and contain protein from multiple sources, including fishmeal, whey, porcine meat and bone meal and soybean meal. These palatable feeds encourage dry matter intake, which is important to keep post-weaned pigs healthy and growing. Prince starter feed is available in a non-medicated form.

### GROWER FEEDS - (#001168)

"Grow-N-Gain" products are designed to be fed to pigs from 50-140 pounds in weight. "Grow-N-Gain" feeds have the same flavor profile as our starter feed to reduce the stress pigs go through when changing feeds. These grower products (17% protein) are available as non-medicated feeds.

Prince concentrate feeds provide proteins, minerals and vitamins that allow the producer to use their own corn in developing swine diets. Concentrates contain proteins, vitamins and minerals (both macro and trace), and will provide the best, most uniform feed for on-farm mix-and-grind operations.

***Prince Starter and Grower feeds are designed for ad libitum (free choice) consumption.***

## PRODUCT OFFERINGS

Prince Feeds offer products for all stages of production: sows, starters, growers and finishers. We provide complete feeds as well as protein supplements and base mixes for on-farm blending.

## • PRINCE'S 42% HOG CONCENTRATE - (#001244)

provides a multiple protein source that can be used to grind and mix feeds for starters, growers, finishers and sows.

Prince base mix products provide the minerals and vitamins needed to mix with corn-soybean based diets. The use of a base mix reduces blending errors compared to simply adding a small VTM pack. Producers may also find it more economical to purchase Prince base mix versus buying Dicalcium phosphate and limestone to use with a VTM pack.

## POT BELLY PIG FEEDS - (#001245)

Pigs love to eat, and the proper type and amount of food he/she gets is very important. Pot-Bellied pig food is designed specifically for pot-bellied pigs and should always be the mainstay of their diet. Prince Premium Pot-Bellied Pig Food is formulated to your pigs' needs based on their condition and percentage of their weight. Prince Premium Pot-Bellied Pig Food is balanced correctly for the amino acids, vitamins and minerals needed to maintain your pig's body tissue and organ regeneration.

Part of good pot belly pig care is proper diet. Feed your pig at least twice a day. A general guide is piglets should be fed on a free-choice basis (as many times as they want) or about 2 cups of Prince Premium Pot-Bellied Pig Food from 6 – 8 weeks old (or as soon as pigs will nibble on it) until 1 year old. At around 1 year you may need to decrease the amount slightly. This will depend on your pigs metabolism and activity level. Each pig is different.

Make sure your pot-belly pig always has access to clean drinking water at all times. Keep in mind that there are times of the year when pigs will drink more. Surprisingly winter is one of those times. Many pigs drink much more in the winter than normal. Or if it is abnormally hot, some pigs may increase their water intake, so make sure you keep them supplied with clean fresh water. Prince Premium Pot-Bellied Pig Food will help keep your pig in top condition.

## BASE MIXES

Swine Grower/Finisher Base Mix and Swine Sow 100. Each contains the macro minerals, micro mineral and vitamins needed by growing pigs or the breeding herd. Each also contains lysine needed to help meet amino acid needs.

## • SWINE GROWER/FINISHER BASE MIX - (#001102)

Prince's Swine Grower Finisher Base provides the minerals and vitamins needed to support superior growth and development in growing swine for market or replacement breeding stock. The level of base mix supplementation declines as pigs reach greater weights and a less mineral nutrient dense diet is required. Prince still recommends the use of its "Start-N-Grow" product for pigs post weaning.

## • PRINCE SWINE SOW 100 BASE MIX - (#044777)

Prince Swine Sow 100 Base Mix is designed to supply minerals, vitamins and additional lysine to the adult swine breeding herd. This base mix is added at a rate of 100 pounds per ton, regardless of reproductive stage. Gestating sows require less nutrients than lactating sows. Feed intake should be restricted in early gestation (4-6 lbs hd/day), but allowed to increase as sows approach farrowing and continue to increase during lactation (10-15 lbs hd/day).
